

Design

Rodolfo Dordoni

Description

Coffee table for outdoor use

Structure

AISI 304 stainless steel frame treated with electrostatic powder painting with polyester base that gives more protection from scratches and also the final coloring to the product.

Top

Stones or HPL grey.

All the stones used for Roda furniture are brushed with a natural effect and protected by an invisible treatment.

Farsena stone: oriental marble with a grey color and a uniform structure with shades of red and salts.

Cardoso stone: a strong and compact low-metamorphic grade sandstone stone formed by the fragmentation of granitic rocks. It has a dark grey/verging on blue color.

HPL (High pressure laminate) of a great quality with a characteristic black heart, very resistant to wear and tear, humidity, steam, UV, fungi, spores and mould. It is self-extinguishing and it is class 2 fire resistant; it does not contain chlorine or asbestos and it is certified by Fira Institute for coming in contact with foodstuff.

Weight

Stone top: 57kg

Maintenance

Stainless Steel

In case of exposition to weather conditions, especially in corrosive environments, (for instance near the sea), to avoid rust formation, it is recommended to wash regularly the product with mild fresh water. If the product needs a thorough cleaning, use a neutral soap (UNIVERSAL CLEANER by RODA) and warm or mild water. Dry immediately to avoid stains and halos caused by water.

Brush following the direction of polish (if the product is not painted) and use a microfiber cloth to obtain a better result. To remove eventual print on the surface, use a glass cleanser or ammonia, rinse out accurately and dry with a cloth.

In case of persistent spots or scratches, use a specific detergent polishing product for stainless steel. Before using it on the product, try it in a hidden part to verify its efficiency and its nodamaging effect. Do not use metallic brushes, abrasive products, acid substances, bleach or chemical aggressive solvents.

HPL

Maintenance and cleaning: use a water-soaked cloth and in case of persistent spots, use a neutral soap (UNIVERSAL CLEANER RODA). Dry carefully. Do not use abrasive products, acid substances, chemical aggressive solvents.

Stone

All stones are protected by an anti-spot treatment, but it is recommended to clean with care the surface to maintain their original aspect in the course of time. In case of spots, it is necessary to clean them immediately with natural soap and absorbent cloth in order not to remove the protection treatment.

For a normal cleaning, use a soaked cloth with distilled water. Only in case of obstinate spots, use few drops of ammonia diluted with water. In any case, try it in a hidden part to verify its efficiency and its no-damaging effect. Do not use abrasive products, acid substances, chemical aggressive solvents.
