

Design

Gordon Guillaumier

Description

Daybed

Structure

AISI 304 stainless steel frame treated with electrostatic powder painting with polyester base that gives more protection from scratches and also the final coloring to the product.

Padded belts

The outer mesh consists in two twisted polyester threads of different colour that create a melange effect, while the padding is made up of a hydrodraining polyester stuffing. The combination of these materials makes the padded tubular suitable for outdoor use and ensures softness, comfort and rapid drying.

Weight

Structure: 52 kg

Storage cover

Available

Finishes

ARN001-01-11
smoke / padded belt grey-blue

ARN001-01-12
smoke / padded belt grey-sand

Maintenance

Stainless Steel

In case of exposition to weather conditions, especially in corrosive environments, (for instance near the sea), to avoid rust formation, it is recommended to wash regularly the product with mild fresh water. If the product needs a thorough cleaning, use a neutral soap (UNIVERSAL CLEANER by RODA) and warm or mild water. Dry immediately to avoid stains and halos caused by water. Brush following the direction of polish (if the product is not painted) and use a microfiber cloth to obtain a better result. To remove eventual print on the surface, use a glass cleanser or ammonia, rinse out accurately and dry with a cloth.

In case of persistent spots or scratches, use a specific detergent polishing product for stainless steel. Before using it on the product, try it in a hidden part to verify its efficiency and its nodamaging effect. Do not use metallic brushes, abrasive products, acid substances, bleach or chemical aggressive solvents.

Padded Belts

Treat the affected area with a soft cloth, water and neutral soap (UNIVERSAL CLEANER). Do not use brushes, abrasive products or aggressive chemical solvents.
